

### **In the Specification**

Please amend the second paragraph at page 6, line 17 of the application as follows:

A first embodiment golf club iron head in accordance with but one aspect of the invention is initially described with reference to Figs. 1-5. Such shows various aspects with respect to a PW, although other numbered clubs are of course contemplated. The Figs. 1-5 club head is designated generally with numeral 10. Such comprises a front striking face 50, a rear face 52, a sole 54, a toe 56, a heel 58 and a hosel 60. Front striking face 50 defines a total, substantially planar, hitting area starting from where the hosel integrally forms into a planar hitting area. Horizontal scoring lines or grooves 55 are formed in striking face 50, and extend between a toe-end vertical terminus location 62 and a heel-end vertical terminus location 64. A preferred set of golf clubs would be manufactured in accordance with Table II of my U.S. Patent No. 5,388,826, which is hereby fully incorporated by reference, although such is in no way required.

Please amend the first paragraph at page 21, line 8 of the application as follows:

The method further includes considering an attribute of a golfer's golf game. Such attribute might include, by way of example only, a golfer's swing as determined visually, digitally or otherwise, a golfer's handicap, or some other attribute. The method contemplates selecting a golf club of the number for the golfer from the ~~inventor~~ inventory array based at least in part on the considered attribute in relation to groove design within the inventory array.

Please amend the first paragraph at page 21, line 18 of the application as follows:

For example, and by way of example only and with respect to degree of groove spin, a 3-iron for a low handicap golfer might be selected to maximize spin as compared to selecting a 3-iron for a golfer with a higher handicap. For example, the low handicap golfer might have an optimized set of clubs selected which tends to produce greater spin in the long irons than in the short irons. Alternately by way of example only, the low handicap golfer might have an optimized set of clubs selected which tends to produce constant spin throughout the set. The reverse or same relationships might of course also be selected by low handicap and high handicap golfers.
